'Science and technology undermines the elderly.' How far is this true in your society?

Find out how technological advancements affect the lives of the elderly.

| Type: | Paragraph Development | Date: | 11 Apr 2020 |
| Name: | Justin Ng | Album: | Modern Society |

Student Answer

1) Topic Sentence

Agree with the question by providing a conceptualized idea and intensify the point by relating the impacts on the elderly.

Answer
The fast-paced development of science and technology has led to greater social alienation of the elderly.

---

2) Elaboration

Explain how the main idea stated in the topic sentence contributes to the negative impacts on the elderly.

Answer
The rate of which science and technology evolve has led to a generational divide as the elderly are unable to quickly adapt and adopt these new technologies unlike their younger counterparts. The widening gap between the elderly and the younger generation will lead to social alienation as the younger generation will perceive the lack of adoption of new technologies by the elderly as stubbornness and would further limited communication between the generations.

---

3) Example

Provide an example to support your main argument - Use personal observation or references to news articles and other relevant discussions.

Answer
eg. This is evident in the introduction of the IT Silver Academy by the Singaporean government which is a program in which teaches basic IT literacy skills to the elderly. This is an acknowledgement by the government that this issue is a serious one and that they are trying to mitigate the adverse effects on the elderly.

---

4) Concluding Sentence

Reiterate your view to support your paragraph's view.

Answer
Hence, the quick pace of science and technology evolution has led to social alienation of the elderly.

Tutor Answer

1) Topic Sentence

Agree with the question by providing a conceptualized idea and intensify the point by relating the impacts on the elderly.

Answer
Science and technology undermines the elderly as rapid technological advancement leads to the social alienation of the older individuals.

---

2) Elaboration

Explain how the main idea stated in the topic sentence contributes to the negative impacts on the elderly.

Answer
As technological progress is achieved, countries undergo economic restructuring to keep their economies competitive. However, the increased usage of technology across different sectors is problematic as the older people are less willing and able to adapt to these changes. Therefore, their technical inadequacies result in the marginalization of individuals in the digitized world.

---

3) Example

Provide an example to support your main argument - Use personal observation or references to news articles and other relevant discussions.

Answer
For example, the National University of Singapore (NUS) sociologist Tan Ern Ser explained that Singapore's progress towards becoming a 'Smart Nation' created a 'sense of helplessness' amongst the elderly. This was attributed to the lack of digital literacy, which inhibited the elderly in coping with these major changes.

---

4) Concluding Sentence

Reiterate your view to support your paragraph's view.

Answer

Hence, it can be observed that technological advancements have adverse impacts on the elderly as they can widen the digital divide between the tech-savvy and the silver-haired individuals.
