

'Science and technology undermines the elderly.' How far is this true in your society?

Find out how technological advancements affect the lives of the elderly.

Type: Paragraph Development

Date: 11 Apr 2020

Name: Ziqing Heng

Album: Modern Society

Student Answer

1) Topic Sentence

Agree with the question by providing a conceptualized idea and intensify the point by relating the impacts on the elderly.

Answer

Science and technology has undermined the elderly through socially alienating them in the society.

2) Elaboration

Explain how the main idea stated in the topic sentence contributes to the negative impacts on the elderly.

Answer

The elderly can no longer cope with the advancements of technology which makes their everyday life difficult for them as the younger generation are using the technology in their every aspects of life and this lessens the communication between the elderly and the teenagers which makes the elderly feel divided from the society.

3) Example

Provide an example to support your main argument - Use personal observation or references to news articles and other relevant discussions.

Answer

There is research in the UK which shows that 40% of the elderly aged 65 and above had never used the internet before. However, in nowadays society, many elderly are not living together with their children, which loneliness might require the elderly to be in touch of things online to fill up their free time.

4) Concluding Sentence

Reiterate your view to support your paragraph's view.

Answer

Therefore, it has been proven that the advancements of technology had separated the elderly from the rest of society.

Tutor Answer

1) Topic Sentence

Agree with the question by providing a conceptualized idea and intensify the point by relating the impacts on the elderly.

Answer

Science and technology undermines the elderly as rapid technological advancement leads to the social alienation of the older individuals.

2) Elaboration

Explain how the main idea stated in the topic sentence contributes to the negative impacts on the elderly.

Answer

As technological progress is achieved, countries undergo economic restructuring to keep their economies competitive. However, the increased usage of technology across different sectors is problematic as the older people are less willing and able to adapt to these changes. Therefore, their technical inadequacies result in the marginalization of individuals in the digitized world.

3) Example

Provide an example to support your main argument - Use personal observation or references to news articles and other relevant discussions.

Answer

For example, the National University of Singapore (NUS) sociologist Tan Ern Ser explained that Singapore's progress towards becoming a 'Smart Nation' created a 'sense of helplessness' amongst the elderly. This was attributed to the lack of digital literacy, which inhibited the elderly in coping with these major changes.

4) Concluding Sentence

Reiterate your view to support your paragraph's view.

Answer

Hence, it can be observed that technological advancements have adverse impacts on the elderly as they can widen the digital divide between the tech-savvy and the silver-haired individuals.
